

## Health & Safety Policy

We, at PolaireTech International, are providers of technology for small-scale natural gas liquefaction plants in the form of standardised, modular LNG solutions. We consider the health, safety, and well-being of all our stakeholders to be of prime importance. This specifically applies to those who utilize our technology to construct and operate facilities, live in the vicinity of facilities, or use LNG from facilities where we are involved.

We will do our utmost to limit greenhouse gas emissions to reduce the probability of adverse health effects resulting from climate change on the global community. PolaireTech International will be recognised for a caring and pro-active approach towards health and safety by our clients and other interested and affected parties.

### To meet this aim, we will:

- Conduct our business in a responsible manner that complies with health and safety laws, applicable regulations, and international best practices.
- Participate in, or support, safety training sessions, incident investigations, health and safety audits and the dissemination of health and safety best practices.
- Continually improve our technology and modular LNG plants with inherent safety in mind to make it easier and safer to operate and maintain.
- Perform Hazard and Operability studies and other related process safety studies on all updated designs or plant modifications.
- Comply with all applicable site safety requirements, safety induction procedures, regulations, and safety practices when working on a client's site.
- Diligently report hazardous conditions, incidents, and injuries to the relevant site authorities at construction and operating sites.
- Critically apply our minds to whatever tasks we conduct to identify the potential hazards and risks and take steps to reduce the probability of incidents and injuries.
- Review and revise this Health & Safety Policy every two years to ensure that it remains relevant to our activities.
